

T-POSTPOUNDER

NEW

T-POSTPOUNDER

The **T-PostPounder** is designed by professional fence installers and utilizes even weight distribution, longer length and a hinging system to allow for easy t-post installation for 6 to 10 foot t-posts. It is a 'must have' for the professional and property owner striving for low cost, efficient fence installation.

Benefit Highlights

Post Set - The T-PostPounder has been specially designed with safety of the user in mind. No need to stand in the bed of your pick-up or the bucket of a tractor any more. With a 'piano' style hinge, you can unload a t-post from the T-PostPounder chamber easily and safely.

Even Weight Distribution -

The T-PostPounder's weight is evenly distributed throughout its body. With even weight distribution, you are able to quickly lift the T-PostPounder up one foot without straining your back, bringing all 35 to 55 pounds of thrust to bear on the t-post for easy installation. No springs or sledge hammer needed.

Long Length - It's four foot to nine foot length eliminates busted fingers and completely covers the t-post throughout the up and down thrust. No more t-posts in the face.

Hinged Door - We've opened the chamber for ease of removal and safety with a hinged door. Now you can stand on the ground and remove the T-PostPounder from the t-post without busted fingers, or a ladder. Just pull the pin, open the hinged door and easily remove the T-PostPounder from the installed t-post.

T-PostPounder Product Specifications -

Standard Size: Up to 8' t-posts, approximately 35 pounds, 4 foot in length.

Large Size: Up to 10' t-posts, approximately 55 pounds, 8 feet in length.
